

European  
Polycarbonate  
Sheet  
Extruders

An EuPC Sector Group

## PRESS RELEASE

Brussels 4 May 2005

### Polycarbonate sheet extruders join forces

EPSE (European Polycarbonate Sheet Extruders), an EuPC Sector Group representing polycarbonate clear sheet extruders, welcomed 4 new members during their February General Assembly: GE Advanced Materials, Bayer Sheet Europe, Polygal Plastics Industries and Palram. From now on, these 4 members of the former European organization EAMPCS ("European Association of Manufacturers of Polycarbonate Sheet") are members of the enlarged EPSE. EAMPCS which was created in 2002 is in phase of liquidation.

Due to the "merger" of non-integrated and integrated companies into one organization, EPSE obtained a much stronger and representative support for defending the interest of the European polycarbonate sheet producers.

Robin Black, President of EPSE, welcomed this merger. "It will only help in achieving the goals of the EPSE organisation, that is to say, ensure a quality product of PC sheets in an enlarged European Union".

EPSE will continue to work on European standards and fire performances but will also develop some further marketing activities to promote PC sheets. The total list of the 11 EPSE members can be found on the webpage [www.epse.org](http://www.epse.org).
